DETAILED ACTION

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the embodiment where there is no stop ring, 63, and the spring abuts the shoulder or the integral raised stop must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 19 recites the limitation "the ring" in line 4. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 20, 22 and 31 are rejected under 35 U.S.C. 102(b) as being anticipated by Roberts et al.

Roberts et al. teaches a quick release mechanism comprising a tool comprising a drive stud comprising an out-of-round drive portion, 12, an adjacent portion, 14, an upset portion, 52, extending radially outwardly from the adjacent portion, and a passageway, 16, extending obliquely with respect to a longitudinal axis, a locking element, 24, slidably received in the passageway to slide between a tool attachment engaging position and a tool attachment release position, and a coil spring, 48, extending around the adjacent portion, the spring comprising a first end coupled with the locking element, and a second end reacting against the upset portion, a releasing spring, 50, biasing the locking element, and collar, 34, extending around the coil spring.

Allowable Subject Matter

Claims 21,23-30 and 32 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim 19 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Claims 1-18 and 33-48 are allowed.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Coren and Vaughn were cited to show other examples of quick release mechanisms.
